

NAIL NIPPERS

LE MED Nail nippers are manufactured using high-pressure forging of layers made of 100% surgical grade stainless steel which is capable to perform under normal or expected conditions and achieves Rockwell HRC 48 to 50. Our nippers are designed for professionals to use for durability, sharp cutting and long-lasting sharpness. The quality of the steel has a crucial influence on the quality of the nippers.

The Nail nippers are formed with a box-joint method which stops lateral play or staggering. It retains cutting edges alignment for life time. Both of the blades are exactly aligned in proper relative positions to cut hard and ingrown nails.

Our Nail nippers curved Jaws are designed to allow a clean cut and give a slightly curved shape of the nails without any ripping or tearing.

Blades touch evenly when closed. Both Blades are exactly aligned in proper relative positions to cut hard nails. Inserted are double springs which allow a smooth and precise floating movement without much of the user's effort.

The handles have a round tension to give you the highest possible grip which allows the hand to have maximum control.

Our highly redefined passivation process protects instruments against corrosion due to repeated sterilization. Responding to customer's needs, it features gently curved, palm-friendly, easy-to-grip ergonomically designed grooved finished handles which gives optimal comfort, performance and expresses the ultimate in functional beauty.

LE MED Nail nippers come in various forms such as nail cutters, head cutters, and ingrown nail cutters. Jaw styles vary from curved, straight, flat, ultra-fine, and pointed jaws in order to meet the comfort and make the nippers user friendly for its intended purpose.

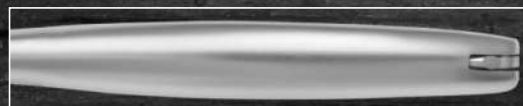

All of LE MED nippers have springs that are assembled with a screw which can be replaced.

Nail Files

STAINLESS STEEL FOOT FILE

Looking to invest in one foot file to use over the long run without any corrosion? LE MED currently has 2 popular demands with its stainless-steel foot files. Our LE MED foot file is designed to allow coarse/medium grit stickers to be used in order to use on multiple people within a short span of time. The file can be purchased with coarse/medium grit stick and peel sand papers which come in a pack of 50 each in order to have 50 customers serviced in a spa/academy with just one tool. Our other most demanded file is the LE MED foot file which is manufactured using high-pressure forging of layers made of 100% surgical grade stainless steel which is capable to perform under normal or expected conditions. Our stainless steel file designed for professionals to use for durability and long-lasting ease of tension. The quality of the steel has a crucial influence on the quality of the file.

Our highly redefined passivation process protects instruments against corrosion due to repeated sterilization. Responding to customer's needs, our stainless steel file features palm-friendly, easy-to-grip ergonomically designed finishes on the handles which gives optimal comfort, performance and expresses the ultimate in functional beauty. This file can be auto claved, reused and is durable for longevity for thousands of uses without any fear of wear or damage,

WOODEN FOOT FILE

LE MED is very proud of its top selling environmental wooden Foot File. It is designed to give you a comfortable grip while using it on your feet with its tough and durable filing surfaces. The file consists of two sides; one to remove the callus while the other to smoothen and buff the skin. The construction of our wooden file undertakes about 50 processes so that it may be waterproof and easily washable without fear of damage. Our wooden files are sanitizable in order to resist against bacteria and other microbes on the soles. With the technology used within the manufacturing process, our foot files are durable and are put over many processes to enforce longevity of the file. The round edges allow comfort to the user while using on the self at home or a customer in the spa. Using the file dry allows it to remove calluses from the skin while wet use allows the skin to be buffed and smoothened.
